Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no antecedent basis for "said NPN and PNP diversion transistors" at lines 3-4 of the claim; by way of suggestion perhaps this claim was meant to depend from claim 2 rather than claim 1.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ryat discloses in fig. 2 complementary differential input stages each having a current source. Cross coupled between the current sources are diode loads that compensate for large common mode signals. Voorman et al. disclose complementary input pairs in fig. 1 for instance that each have a current source transistor coupled to their common emitters, and a pair of diode transistors coupled therebetween. The applicant is presumed familiar with his prior patent cited as Carter.

Claims 1-2 and 4-18 are allowed.

None of the references of record generate complementary currents to modulate the tail current as a function of the difference between the common emitter node voltages of the differential pair as required by claims 1 and 28 or using transistors having their bases connected to the respective common emitter nodes of the differential pairs to generate or divert such currents as a function of the voltage difference between the nodes as required by claims 4 and 24.
